concept

① REST TEMPLATE (HELP??)

url

@ Bean

class

@ Component

singleton

= @ Bean

per

⇒ 1 Baeldung (Rest template) ⇒

② ACTUATORS

ε-wallet

Requires

User → we should be able to insert use, get all use, get user by ID

Wallet → We should be able to insert wallet who is associated with portfolio
9.35
→ Top up
→ get wallet

Transaction → We should be able to move money from one wallet to another.
→ We should be able to see the transaction relation user.

Bank
→ Entity & their property
→ Controller that we should expose

Tran
In 15 min

① Registers →

② Create his/her Wallet. ←

③ Show the user, wallet corresponds to his/her

④ Get the Balance in wallet.

⑤ Add the Balance.

⑥ Sending the Money

⑦ Transaction History ⇒ (Email)

Follow ups

Design Security

- DTO / Assembler
- Improve on Validators (Policy Authn)
- Try to include Security feature in the User / Wallet Service.
- Improve on Coding Style of Send Transaction method ^{Inside wallet service}
- Configure Email parameters.
- Integrate with Bank for Balance topup

wallet
